2: Laboratory Department, Habib Thameur Hospital, Tunis, Tunisia.

## Introduction :

*Klebsiella pneumoniae is classified as a high-priority pathogen by the World Health Organization due to its role in severe infections and its increasing antimicrobial resistance.*

## Aim of the study:

*The aim of our study was to determine the prevalence and antibiotic susceptibility patterns of K. pneumoniae isolates recovered at Habib Thameur Hospital in Tunis.*

## Methodology:

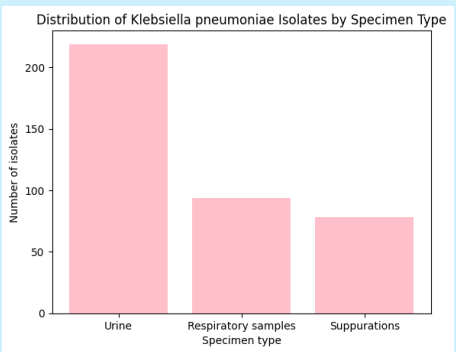
**Descriptive study**

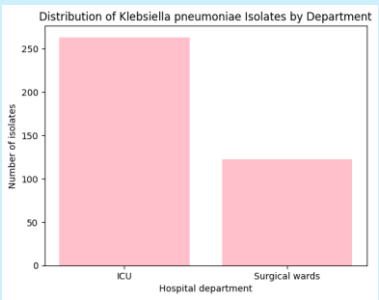
**Bacteriology Unit**

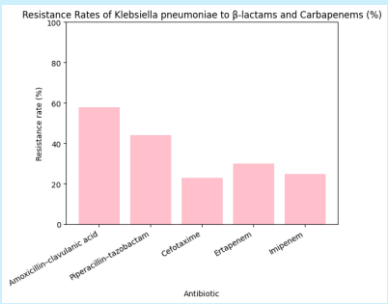
**2024**

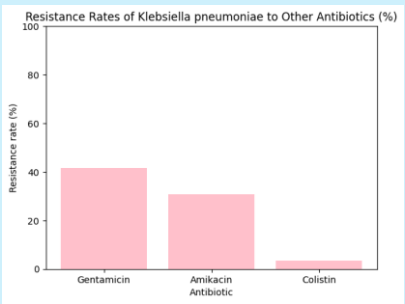
*K,pneumoniae strains*

## RESULT:









## Conclusion:

The resistance profile of K. pneumoniae isolates highlights the urgent need to reinforce therapeutic strategies and infection control measures to better manage healthcare-associated infections caused by this pathogen.
